

DIYA TOSHNIWAL

B.Tech – Information Technology · 2nd Year · 2028 Batch · Pune

diyatoshniwal06@gmail.com · linkedin.com/diya-toshniwal · github.com/DIYAA0606 · leetcode.com/Diya_6 · hackerrank.com/diyatoshniwal06

EDUCATION

Pune Institute of Computer Technology · B.Tech, Information Technology · Pune, Maharashtra

2024 – 2028 · Current CGPA: 9.75 / 10

- Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Computer Organisation, DBMS

TECHNICAL SKILLS

Languages: C, C++, Java, comfortable writing logic-heavy programs from scratch

OOP: Classes, Objects, Inheritance, Polymorphism, Encapsulation (practised in C++ & Java)

Data Structures: Arrays, Linked Lists, Stacks, Queues, Trees, implementation-level understanding

Problem Solving: Active on LeetCode & HackerRank, 60+ problems solved, Easy-Medium-Hard

Web & Tools: HTML, CSS, Bootstrap, Git, GitHub, VS Code, Kotlin, React

PROJECTS

Smart Irrigation & Soil Monitoring App · Kotlin · Android · OpenWeatherMap API ·

- Built an Android app in Kotlin during a hackathon with multiple screens like dashboard, weather, history, and recommendations.
- Integrated OpenWeatherMap API to fetch real-time weather data and used location services for better accuracy.
- Added simple rule-based logic (like moisture < 30% triggers irrigation, rain pauses it) to make the app more practical.
- Stored data locally and kept the structure flexible so it can be extended later for IoT integration.

Pathfinding Visualizer — BFS · JavaScript · HTML5 Canvas · CSS3

- Implemented Breadth-First Search from scratch on a 2D grid using HTML, CSS, and JavaScript.
- Built features like wall creation, animation of traversal, and speed control for better visualization.
- Faced challenges in syncing grid logic with UI rendering, solved it by separating logic and display.
- Planning to add more algorithms like DFS and A* for comparison.

Magnate: User-Facing Frontend · PICT EDC · Team Project

- Contributing front-end developer on a live product built for PICT's Entrepreneurship Development Cell real users, real codebase, real deadlines.
- Working within an existing team structure: reading others' code, following conventions, and making changes that don't break what's already working, a different skill from solo projects.
- Gained first-hand experience of what collaborative software development actually looks like: pull requests, code reviews, and coordinating features across teammates.

PROBLEM SOLVING & DSA PRACTICE

LeetCode / HackerRank · Active Participant · Jan 2025 – Present

- Solved 60+ problems on LeetCode and HackerRank (mostly Easy–Medium).
- Focus on understanding the logic first, then coding.
- Comfortable with arrays, strings, linked lists, and basic trees.
- Consistently practicing to improve speed and thinking approach.

POSITIONS OF RESPONSIBILITY

VICE PRESIDENT – EDC PICT

- Currently serving as VP, helping coordinate between students, team members, and faculty.
- Involved in planning and organizing events, supporting execution wherever needed.
- Assisting in task delegation and tracking progress within the team.
- Still in the learning phase, gaining experience in managing responsibilities and working with people.
